

# What is your conclusion?

Planetariums have brought the sky closer to millions of people, following not only the development of science and technology, but also cultural changes. In 100 years, planetariums have made artificial stars shine, visualized the universe in 3D, and opened up new avenues for art and culture in the domed round. Promot-

ing science education and developing understanding of our environment remains a primary concern after 100 years. How will planetariums change in the next 100 years? Will it feature virtual realities and holographic content? It's up to you to find out. Visit the planetarium regularly and you will be amazed.
