

# Stories in the Sky

The constellation of the White Emu was known in the Tupi-Guaraní culture in Brazil. Graphic by Mário Sérgio Moreira.

Before the era of telescopes and before the construction of planetariums, all cultures of the world looked at the sky with admiration and wonder. People depicted their own cultures in the sky, using the Sun, Moon and

constellations to mark the passage of time, the seasons, the best time to sow or harvest, hunt, move or rest. The sky was an open book where stories were written to pass knowledge down through generations.
